

Success Story: Storm-Tested Coverage Delivered Investor Confidence in \$524M Solar Project | Tigercomm

SUCCESS STORY

18 Media Placements. 40+ VIPs. One Winter Storm.

How Tigercomm turned a weather crisis into a high-impact groundbreaking for a \$524M Korean-led solar project in Texas

AT A GLANCE

Client	KOMIPO America / EIP Asset Management
Project	Lucy Solar – 350 MW, \$524M, Concho County, TX
Timeframe	January 9 – February 13, 2026 (5 weeks)
Services	Event strategy, PR & media relations, crisis management, emcee, videography & photography

18 Media Placements	40+ VIP Attendees	6,136 Wire Views	77 Syndications
------------------------	----------------------	---------------------	--------------------

AS SEEN IN

PV Magazine • PV Tech • CleanTechnica • Dallas Innovates • ChosunBiz • BusinessKorea • KACU NPR

CHALLENGE

A Korean-led consortium was preparing to break ground on Lucy Solar, a \$524M, 350 MW solar project in Concho County, Texas – one of the largest Korean renewable energy investments in the U.S. C-suite executives from Hyundai E&C, KOMIPO, and four other partners were flying from Seoul. The site was 250 miles from the Dallas airport in a county with minimal infrastructure and no media market. Nine partner organizations each had distinct brand hierarchies. The contract was signed January 9 for a January 27 event – 15 business days. Then Winter Storm Fern hit: statewide disaster declaration, road closures, and the outdoor venue became unworkable. Postponement was not an option.

STRATEGY

From the first discovery call, the client defined success as building investor confidence in their Project Lucy investment. Tigercomm built a narrative around an international partnership powering Texas economic growth – leading with \$524M in investment, 500 jobs, and \$5M/year in tax revenue. Media outreach targeted three tiers: local Texas, U.S. clean energy trade press, and Korean business media. A sensitive Q&A document coached executives on the political environment without scripting responses.

EXECUTION

- Mobilized a six-person team and event production partner within 72 hours; ran four coordination calls across nine organizations on 24-hour approval cycles.
- Issued a weather risk memo with five hazard scenarios; upon client approval, relocated the entire event to the Sheraton DFW Grand Ballroom in under 72 hours.
- Produced a bilingual ceremony for 40+ VIPs with six speakers, ceremonial shovel turn, professional photography and videography, and full electronic press kit.
- Released on BusinessWire (U.S. + South Korea), executed targeted post-event pitching, and secured a post-event NPR interview.

RESULTS

Despite the difficult travel conditions, 95% of the invited attendees were able to make it to the groundbreaking and the event went off without a hitch. The announcement generated 18 original stories across clean energy trade (PV Magazine, PV Tech, CleanTechnica), Korean business press (ChosunBiz, Asia Business Daily, BusinessKorea), local Texas media (Dallas Innovates, KLST-TV, KACU NPR), financial, and construction outlets. Outlets like PV Magazine and PV Tech do not typically cover groundbreakings; their pickup signals the project was viewed as market-relevant. The program ran on schedule with high production value despite the indoor pivot.

“Tigercomm’s leadership and attention to detail delivered a remarkable groundbreaking experience for a VIP delegation of Korean and American partners. When severe weather forced us to relocate on short notice, Tigercomm acted quickly and kept the entire program cohesive and turnkey.”

– HeeJun Park, President & CEO, EIP Asset Management
