How Tigercomm Turned a Regional Factory Expansion into a National Manufacturing Story, Enabling Client to Connect With Customer Demands for Domestic Content and Supply Chain Stability

AT A GLANCE

100+ Outlets Targeted • 20+ Media Stories • Full Sweep of Local TV

CHALLENGE

Nextpower and JM Steel expanded manufacturing capacity in the Pittsburgh region to support growing U.S. solar demand for supply chain stability by reshoring domestic solar manufacturing.

- **Not a novel announcement:** The factory officially reopened in 2022, so the 2024 expansion needed a timely news hook to get attention. Both companies needed to elevate the story beyond a routine factory announcement.
- **Regional footprint could have limited media interest:** The company needed to connect a local expansion to broader U.S. supply chain and energy security themes its customers were prioritizing.

STRATEGY

To maximize local coverage, Tigercomm positioned Nextpower's factory expansion as a major milestone in the Steel City's industrial resurgence – and solar's role in growing local jobs as a patriotic act. domestic energy supply.

Given executive leadership's limited availability during the event, Tigercomm recommended training a Pittsburgh-based subject matter expert for media interviews, giving us a compelling, local angle for pitching area media.

EXECUTION

Tigercomm targeted ~100 trade, national, and local outlets and helped prepare the client with tight messaging, talking points, and dry runs. We put together a media kit centered on the visual *history* of the factory, 2022 reopening visuals, and updated 2024 photography. We connected local facts like Pittsburgh's shift to green steel to national themes like domestic energy security and supply chain resilience, so any national reporter who approached us already had the materials to tell a bigger story.

RESULTS

The announcement generated over 20 media stories, including a sweep of local TV stations. The majority of the coverage landed within days of the event. But that strong local coverage allowed us to show the significance of its example to national reshoring trends. We were able to generate an [NPR piece](#) on just that trend that ran in the weeks that followed.

The company said the resulting attention registered with customers. Event coverage also put Nextpower firmly in the top rank of similar publicly traded companies.
