

Success Story: Client Dominates Top Trade Magazine During Biggest Show of the Year | Tigercomm

SUCCESS STORY

How 1 Interview Led to 3 Articles, Including Cover Story Image Circulated to 40K+ Potential Customers

AT A GLANCE

1 Cover Image • Top Solar Mag • 35K Circulation • 358K UVM • ~40K Attendee Event

CHALLENGE

RE+ is the largest solar industry event in the U.S., drawing over 40,000 attendees and intense competition for media attention during the show. With dozens of companies vying for visibility, breaking through required a different approach.

- **Highly saturated media environment:** Dozens of major industry companies all competing for limited editorial space.
- **High-value target:** pv magazine's show issue is its most highly coveted issue.

STRATEGY

As the world's leading solar OEM, Nextpower's sales juggernaut uses the RE+ North America trade show to advance sales with prospects. Every minute of every hour is booked for sales meetings, so visibility before and at the show is crucial. Tigercomm used its deep relationships with 34 target energy trade outlets to prioritize seven editorial calendar opportunities for the company. For RE+, Tigercomm targeted pv magazine's issue for its industry-leading readership.

EXECUTION

The magazine's RE+ issue was hard copy, circulated to every attendee. We knew it would focus on solar trackers and extreme weather, so Tigercomm connected with the editor to secure interest in a long-form story on hail risk, which Nextpower's equipment solves for. Tigercomm also analyzed past covers and guided Nextpower in picking strong imagery tailored to what the editor would prefer.

RESULTS

Tigercomm secured Nextpower as *the* cover image for pv magazine's RE+ issue, along with a [feature story](#) showcasing company experts. The combination put Nextpower's brand in front of ~40,000 industry executives, boosting visibility with people in active sales conversations at the company's booth.
